FMRFamide-like protein - tobacco hornworm
C;Species: Manduca sexta (tobacco hornworm)
C;Decies: Manduca sexta (tobacco hornworm)
C;Decies: Manduca sexta (tobacco hornworm)
C;Date: 11. Feb-1993 #sequence_revision 11-Feb-1993 #text_change 17-Mar-1999
C;Accession: A43977
R;Kingan, T.G.; Teplow, D.B.; Phillips, J.M.; Riehm, J.P.; Rao, K.R.; Hildebrand, J.G.;
Peptides 11, 849-856, 1990
A;Title: A new peptide in the FMRFamide family isolated from the CNS of the hawkmoth, Ma Reference number: A43977; MUID:91045350
A;Raccession: A43977
A;Molecule type: protein
A;Residues: 1-10 <KIN>
C;Keywords: amidated carboxyl end; neuropeptide; pyroglutamic acid
F;10/Modified site: pyrrolidone carboxylic acid (Gln) #status experimental
F;10/Modified site: amidated carboxyl end (Phe) #status experimental
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           protein P7 - curled-leaved tobacco (fragment)
